COMPANY OVERVIEW & IDENTITY

GOOGI TECHNOLOGIES is a premier ICT solutions provider based in Tanzania, specializing in cutting-edge technology services for businesses across the region.

With over a year of experience in the Tanzanian market, we have established ourselves as a reliable partner for businesses seeking to leverage technology for growth and efficiency. Our team of certified professionals is dedicated to delivering world-class ICT solutions tailored to the unique needs of our clients.

Based at Ubungo in Dar es Salaam, we serve clients nationwide with a comprehensive range of services including computer systems, networking, cybersecurity, telecom solutions, and 24/7 IT support.
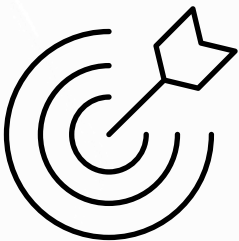

Our Vision

A world where technology seamlessly integrates with human potential, creating a more efficient, connected, and intelligent future.

Our Mission

To develop and deliver cutting-edge ICT products and platforms that drive innovation, enhance productivity, and solve complex challenges for organizations globally.

Quality Policy

Googi Tech quality policy is to achieve sustained, profitable growth by providing customer-centric, qualitative ICT Solutions and Services on time, while ensuring strict compliance to contractual and regulatory requirements.

Business Portfolio
OUR CORE BUSINESS

OUTSOURCING

Are you looking for IT expertise or service? We have options to meet your requirements.

Our outsourcing services include:

- Software and web application development
- Mobile application development and maintenance
- IT support and system administration
- Cloud services and infrastructure management
- Cybersecurity and data protection solutions
- UI/UX design and digital product optimization
- Technical consulting and project management

AUTOMATIONS

Are you looking to automate your business processes and eliminate repetitive manual work?

Our automation services include:

- Business process automation
- Workflow and task automation
- Robotic Process Automation (RPA)
- Data processing and reporting automation
- System and platform integrations
- API automation and synchronization

DEVELOPMENT

From concept and design to deployment and maintenance, we work closely with clients to deliver high-quality software tailored to their specific needs and goals.

Our development services include:

- Custom software development
- Web application development
- Business systems development (ERP, CRM internal tools)
- MVP development for startups
- API and backend development
- System integration and modernization

Our Outsourcing Service

Dedicated On-Site Technology Personnel

We deploy skilled IT professionals to work full-time at the client's premises based on agreed qualifications and experience. The client provides the working environment and oversees daily task assignments, while regular performance feedback is shared with our team. Depending on contractual terms, required tools such as laptops, mobile devices, or other equipment may be provided by either party.

Fully Managed On-Site IT Teams

This solution is designed for organizations requiring a larger on-site IT workforce. In addition to staff deployment, we take full responsibility for team supervision and operational management. An on-site coordinator is assigned to manage attendance, productivity, leave schedules, sickness, and staff replacement when necessary, ensuring smooth day-to-day operations and consistent service delivery.

Off-Site Technical Assistance Services

We offer reliable IT support remotely under a clearly defined Service Level Agreement (SLA). Support is delivered through telephone assistance, secure remote system access, and scheduled or emergency site visits when required. This approach enables rapid issue resolution while reducing operational and infrastructure costs.

➤ On-Demand IT Support Services

This flexible support option allows clients to request assistance whenever technical issues arise. Support may be delivered remotely, over the phone, or through physical site visits depending on the nature of the issue. Services are provided based on client requests, ensuring fast response times and minimal disruption to business operations.

GOOGI
TECHNOLOGIES

System Integration and Development
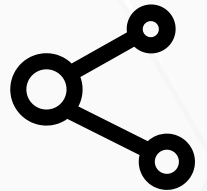

Got you covered......

Custom Software Solutions

We design and develop tailored software systems that align with specific business needs and operational goals. Our solutions are built to improve efficiency, automate processes, and support scalability across web, mobile, and enterprise environments.

Business/Company System Integration

We connect multiple systems, platforms, and applications into a unified and efficient ecosystem. This includes integrating third-party tools, enterprise software, databases, and cloud services to enable seamless data flow, reduce manual work, and improve overall system performance..
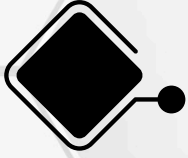

Enterprise Application Development

We develop robust enterprise-grade applications that support core business operations such as finance, operations, customer management, and reporting. Our applications are built with security, performance, and future expansion in mind.

API Design & Connectivity Services

We create secure and well-documented APIs that allow different systems to communicate efficiently. Our API services enable smooth integration between internal systems and external platforms such as payment gateways, mobile apps, government systems, and partner services.

Legacy System Modernization

We help organizations upgrade or transform outdated systems into modern, scalable, and secure platforms. This includes system reengineering, data migration, performance optimization, and integration with newer technologies while preserving critical business data.

Testing, Deployment & Ongoing Support

We ensure systems are thoroughly tested before deployment to guarantee reliability and performance. Post-deployment, we provide continuous support, monitoring, and enhancements to keep systems running smoothly and aligned with evolving business requirements.

MEET THE DIRECTOR

CEO, GOOGI TECH LTD

Mr. Goodluck Alamu Kapyela is the Director and Chief Executive Officer of the company, bringing a strong blend of academic excellence, technical expertise, and industry-focused leadership. He is an electronics and information technology specialist with extensive experience in system development, digital transformation, and applied research.

Mr. Kapyela holds a Bachelor of Science in Electronics and Communication and a Master of Science in Electronics Engineering and Information Technology from the University of Dar es Salaam, where his postgraduate research focused on advanced medical image processing to improve diagnostic accuracy. He is currently pursuing PhD studies in Electronics Engineering and Information Technology at the same University, with research interests spanning artificial intelligence, machine learning, computer vision, signal processing, and embedded systems.

Beyond academia, Mr. Kapyela has hands-on experience in teaching, consultancy, system design, and technology-driven problem solving, having served as an assistant lecturer and technical expert across multiple institutions. His leadership is grounded in a strong understanding of both theoretical and practical aspects of modern technology, enabling the company to deliver innovative, scalable, and reliable digital solutions. As CEO, he is driven by a vision of using technology to solve real-world challenges, empower organizations, and contribute to sustainable digital growth across industries.
